What sets our wiring apart:

We take pride in using only the highest-quality components for our wiring solutions. Our connectors, seals, terminals, and USA-made OEM grade TXL wire stand out from the competition, especially when compared to imported products from China. We use GM-specified applicators to guarantee factory-grade wire crimps, adhering strictly to OE specifications. To ensure uncompromised quality, we perform pull tests and check continuity on every single wire assembly before it leaves our facility. Our commitment to excellence ensures that our customers receive properly assembled, reliable wiring solutions.

What does your manufacturing process look like?

Our in-house process is geared towards delivering the most consistent and high-quality wire assemblies available. We employ a fully automated machine that is designed to meet the stringent standards we set for our products. Additionally, for assemblies that would traditionally involve soldered joints, we utilize a state-of-the-art ultrasonic welding process. This process does not involve solder, which eliminates the risk of joint contamination. As a result, our wire assemblies are not only stronger but also longer-lasting compared to soldered joints.

Need help identifying a connector?

We have a guide for that and much more!

We have done years of research to compile the most useful tips and guides available for LS and LT engines. From wiring connectors to fuel injectors to RPO codes, we have you covered!

We offer vehicle specific build sheets!

Here at ICT Billet our processes are all about making sure your engine fits perfectly in your swapped vehicle. To accomplish this, we use the latest tools in technology, such as laser scanners, paired with our 3D CAD software. We meticulously laser scan each vehicle then build a CAD model, where we test fit the engine, transmission, common accessories, headers, oil pans, and of course ICT Billet brackets. Once the placement of the engine is set, we will create brackets for the ideal locations of the alternator, power steering, and A/C compressor. With these high-tech methods we can provide you with the best fitting, highest quality products on the market! If this wasn't enough, we make our parts in our huge manufacturing/warehouse facility, strategically placed right in the heart of America, Wichita Kansas. Stocking all your favorite products so we can ship them the same day when you order!
